

Denbury

Denbury Resources, Inc., is conducting a Geophysical Survey in the local area including the Reservoir.

Setup activities including survey have begun and actual seismic activities will begin in early October and last for approximately 6 weeks. These activities will occur only during daylight hours.

Residents who are nearby when a seismic sound wave is emitted may hear a low frequency sound or a muffled “thump”. Farther away, the sound is less obvious and for many will be imperceptible.

For more information on Denbury’s operations please visit www.metrojack3d.ras-us.com. To speak with a local agent call (877) 884-8134.

**Example of a Seismic Monitoring System
(Normally in place for a 20+ day period)**
